

IN THE TITLE

Please amend the title to read --FIFO MEMORY WITH TWO COUNTERS--.

IN THE SPECIFICATION

Page 2, line 4, please replace the paragraph beginning "In the Kahn process network" with the following:

In the Kahn process network the processes communicate with each other in a pipelined manner, i.e. the slowest process in the pipeline determines its throughput. If the computation is improperly balanced among processes itf will reduce the effective parallelism within the application model.
